VEHICLE ELECTRONICS

This catalogue is intended for vehicles/engines officially imported or manufactured in the UK and supersedes all previous versions, which should be disposed of. Whilst every care is taken in compiling these lists of applications, they are given for general guidance only, and do not constitute any contractual term, representation, or warranty and as such Niterra UK Ltd. do not accept any responsibility in respect of any claim whatsoever and howsoever caused arising from the publication of this catalogue.

NGK and NTK products **distributed by Niterra UK Ltd** are designed solely for use in automotive, motorcycle, marine, horticultural, agricultural, commercial, industrial, and stationary engines. **They should not be used in any airborne engines.** Niterra goods destined for any aviation use are likely to differ in specification and should be purchased through the OES parts supplier for the engine.

Resistor spark plugs should always be used where they are recommended by the manufacturer. The use of non-resistor plugs could, in some cases, result in interference with and/or damage to electronic components.

Specifications subject to change without notice.

NGK and NTK products listed in these application guides do not apply to racing or modified engines, except where explicitly stated.

MAF SENSOR TECHNICAL INFORMATION

WHAT IS A MAF?

A MAF is an **M**ass **A**ir **F**low sensor responsible for providing the vehicle control system with information on the fresh air flow into the vehicle engine air intake system.

THERE ARE THREE TYPES OF MAF;

Housing type;

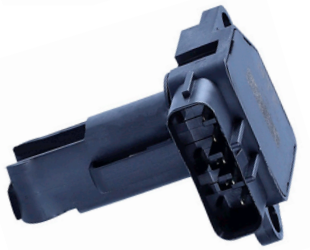
Supplied complete with the air inlet/outlet housing. This can vary between housing where the sensor can be removed, or molded and unremovable from the housing.

Plug in type;

These items are designed to replace the vehicle sensor that is installed into a removable housing, without purchasing the full housing complete.

Direct fitment type;

This type of sensor is solely designed to be installed into vehicles that utilise an existing item fitted within the air filter housing, instead of a dedicated housing in the intake tract.



INTEGRATED TEMPERATURE SENSOR

Some item references can include an integrated temperature sensor to provide intake air temperature information to the vehicle engine management system for tighter control of the air/fuel regulation.

MAP SENSOR TECHNICAL INFORMATION

WHAT IS A MAP?

A MAP is an **M**anifold **A**bsolute **P**ressure sensor responsible for providing the vehicle control system with Absolute air pressure information within the vehicle engine air intake system.

THERE ARE TWO TYPES OF MAP (sometimes combined into a single unit);

Manifold absolute pressure sensors;

These items will measure the 'absolute' air pressure (not the relative air pressure which can change with altitude and climate conditions), in relation to a perfect vacuum. Not all vehicles utilise a MAP sensor, and tend to be limited to naturally aspirated (non-forced induction) vehicles.

Boost pressure sensors;

These items still measure the 'absolute' air pressure, but are capable of measuring the higher pressure state of forced-induction (turbo, supercharged) vehicles. Certain references within the NTK range are a single piece, combined Manifold and Boost Pressure sensor.

INTEGRATED TEMPERATURE SENSOR

As with the MAF sensors, some item references can include an integrated temperature sensor to provide intake air temperature information to the vehicle engine management system for tighter control of the air/fuel regulation.

DIAGNOSIS

SYMPTOMS WHEN MALFUNCTIONS OCCUR

- Unstable or erractic engine running
- Abnormal increase of fuel consumption
- Engine power loss
- Misfiring
- Smoke emissions
- Engine stalling

FAILURE MODES

MAF sensors are prone to their performance being affected by;

DUST: Particles of dust in the air being drawn through the sensor become attached to the sensing surfaces. This reduces the performance of the sensor. Other causes of dust or dirt contamination can be caused by a wrong, worn, dirty, defective or ill fitting air filter or air leakage in the intake system.

WATER: Rainwater ingress can damage a sensor if it penetrates the intake system after heavy rain/flooding.

OIL: Oil mist within the intake system will soon contaminate sensor surfaces. This can be caused by excessive oil venting from the engine, mechanical wear, oil level too high or a defective turbo charger. A non-standard oiled type performance air filter has also been linked to sensors becoming contaminated with oil. Always follow the manufacturer care instructions.

VIBRATION: Vibration over time or an impact.

MAP sensor performance deteriorates due to:

AIR LEAKS: Upon replacement, always check for air leakages in the intake system.

NORMAL DETERIORATION: Diaphragm weakening or failure.

VIBRATION DAMAGE, DUST/WATER and OIL CONTAMINATION: see MAF above.

Common MAF/MAP error codes

1	P0068	**MAP/MAF - Throttle Position Correlation** • Cause: ECU is generating a conflict of expected data between MAF and Throttle sensor • Solution: Check for air intake/vacuum leaks, replace sensor if necessary	5	P0108	**MAP Pressure Circuit High Input** • Cause: ECU receiving signal data higher than expected values • Solution: Check wiring/short to ground, dirty throttle body restricting air flow
2	P0101	**MAF circuit range/performance** • Cause: Contaminated or blocked air filter, unmetered air entering engine • Solution: Check for air leaks, condition of air filter	6	P0105	**MAP Circuit Malfunction** • Cause: Faulty or clogged MAP sensor • Solution: Check sensor, low battery voltage can also restrict sensor signal outputs
3	P0104	**MAF circuit intermittent** • Cause: An erratic or intermittent signal being received by the vehicle ECU • Solution: Check the sensor, wiring condition and battery/charging voltage, replace sensor if necessary	7	P0069	**Manifold Absolute Pressure - Barometric Pressure Correlation** • Cause: ECU receiving conflicting data between the MAP sensor and other system pressure sensors • Solution: Check sensor and for vacuum leaks/blockages
4	P0171	**System too lean (bank 1)** • Cause: Often related to front position Oxygen sensor performance, but can be generated by a faulty MAF • Solution: Check for unmetered air entering the engine, before assuming MAF sensor fault	8	P0107	**Manifold Absolute Pressure/Barometric Pressure Circuit Low Input** • Cause: ECU receiving below normal input signals from system pressure sensors • Solution: Check sensor, poor connections on wiring, and for vacuum leaks/blockages

NTK PART NUMBER BREAKDOWN

EPB MW T 3 – D 005 H

PRODUCT CATEGORY
EPB: NTK MAF/MAP sensor

ARTICLE NUMBER
Three-digit serial number

SUFFIX
MAF
H: Complete with **H**ousing
P: **P**lug into Original Housing
D: **D**irect Fitment Type*
MAP
Z: (NTK Internal Suffix)

* No Housing. Vehicle design accomodates the sensor within the air intake/filter housing.

TECHNOLOGY
MAF
MW: **H**ot **W**ire
MF: **H**ot **F**ilm
MAP
MP: **M**anifold Absolute **P**ressure
BP: **B**oost **P**ressure
MB: **M**anifold and **B**oost pressure

TEMPERATURE SENSOR
T: Integrated **T**emperature Sensor
N: **N**on-Temperature Sensor Type

NUMBER OF CONNECTOR PINS
Single-digit number
