THE IRIIDIUM IX SPARK PLUG

The Iridium IX spark plug benefits from the use of the precious metal Iridium on its centre electrode. Iridium is harder than other precious metals used in spark plug manufacture, has an extremely high melting point and offers greater protection from chemical attack. These features allow the use of an extremely small diameter electrode (0.6mm) without compromising the spark plug's service life. When compared to nickel plugs, service life is greatly extended. Combined with the use of the taper cut ground electrode this spark plug has superior gas flow properties and lower voltage requirements, which offers further improvements in starting, idling and throttle response.

BR8EIX

Iridium spark plugs are used in many high performance engines and in competition. Owners who want the very best performance will want the best spark plug we can offer with Iridium IX.

Iridium IX packaging

The close up section shows the annular gap between the centre electrode and insulator nose which provides cold fouling protection.

Should current try to leak away across a carbonised insulator a spark can occur between the electrode and the insulator thus burning away the carbon deposit.
