PRODUCT INFORMATION

Ignition Coil Images _____	158 - 193
Conversion Chart _____	194 - 215

This catalogue is intended for vehicles/engines officially imported or manufactured in the UK and supersedes all previous versions, which should be disposed of. Whilst every care is taken in compiling these lists of applications, they are given for general guidance only, and do not constitute any contractual term, representation or warranty and as such NGK Spark Plugs (UK) Ltd. do not accept any responsibility in respect of any claim whatsoever and howsoever caused arising from the publication of this catalogue.

NGK and NTK products are designed solely for use in automotive, motorcycle, marine, horticultural, agricultural, commercial, industrial, and stationary engines.

NGK and NTK products should not be used in aircraft engines.

Resistor spark plugs should always be used where they are recommended by the manufacturer. The use of non-resistor plugs could, in some cases, result in interference with and/or damage to electronic components.

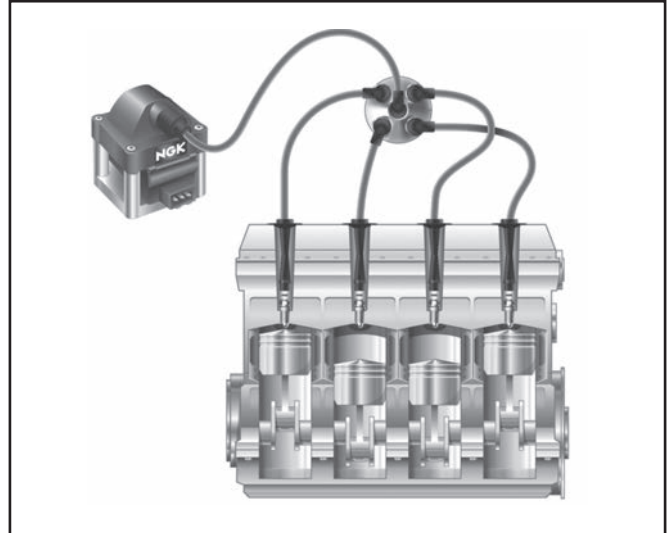

NGK and NTK products listed in the application guides do not apply to racing or modified engines, except where explicitly stated.

IGNITION COIL DESIGN

Various types of ignition coil are used depending on the technology used on a vehicle. The range of NGK ignition coil types are described below along with an explanation of the NGK ignition coil part number. Please note that diagrams are for illustrative purposes only. Ignition cables are not included unless specified.

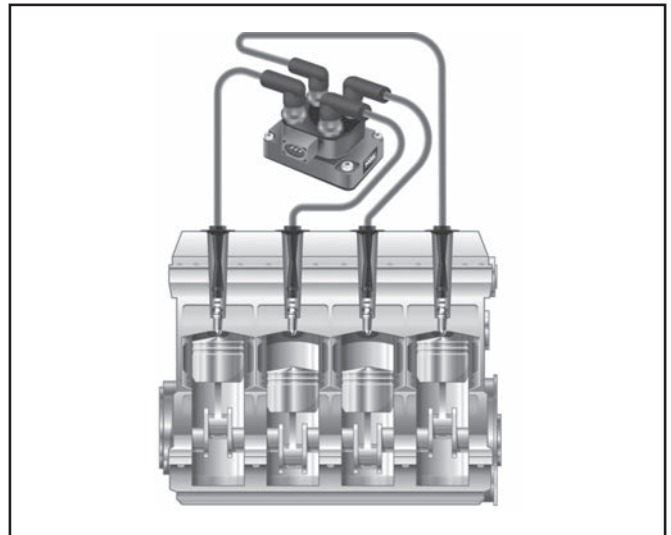

DISTRIBUTOR COILS U1000

NGK **U1** type ignition coils supply the spark plugs with the high voltage via a mechanical ignition distributor. Usually one ignition coil per vehicle is fitted of this design.

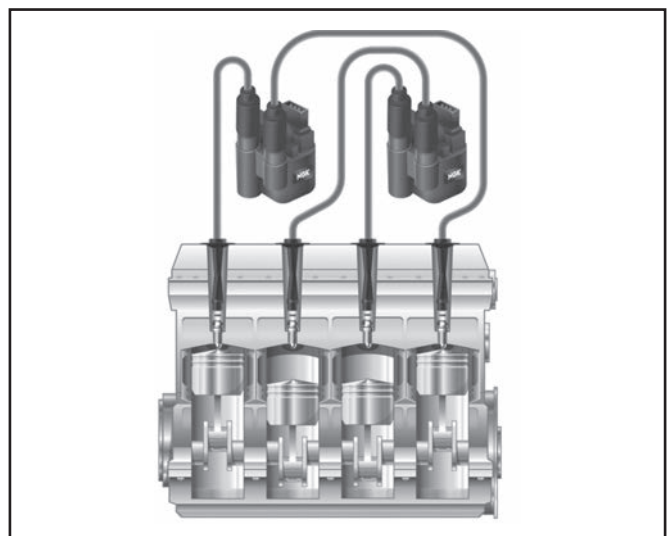

BLOCK IGNITION COILS U2000

NGK **U2** ignition coils are often referred to as block ignition coils. This type of coil supplies multiple spark plugs with high voltage through ignition cables connected directly to the coil. No mechanical distributor is required.

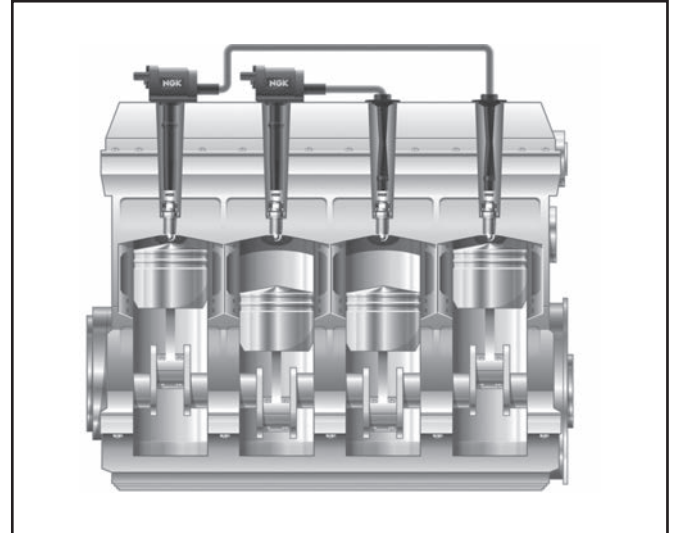

BLOCK IGNITION COILS (PAIRED) U3000

As with the U2 type, NGK **U3** type ignition coils are block type but supply only two spark plugs per coil therefore several of these coils may be required depending on the quantity of spark plugs present. Spark plugs are connected via ignition cables.

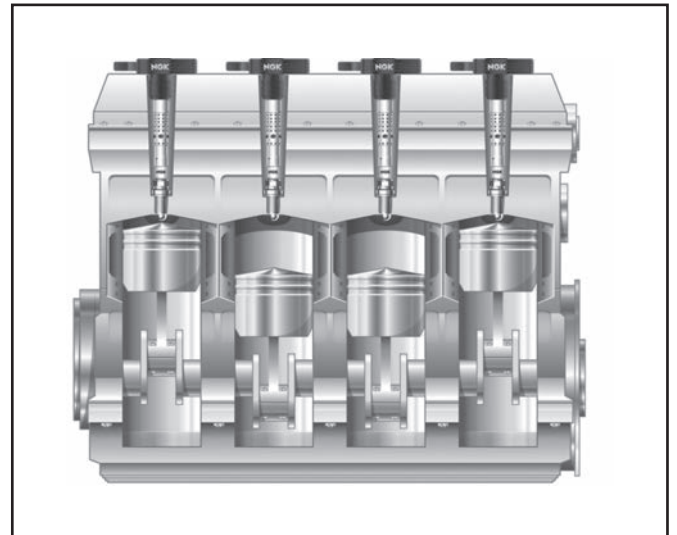

PLUG TOP COILS (PAIRED) U4000

NGK **U4** ignition coils are fitted directly on to the spark plug (commonly referred to as a plug top coil) but also supply an additional spark plug via an ignition cable.

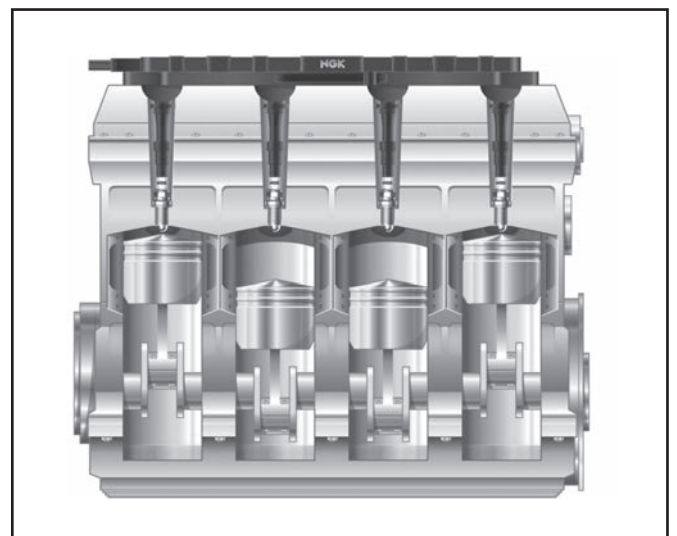

PLUG TOP COILS U5000

As with NGK **U4** type ignition coils, the U5 type fits directly on to the spark plug. With this type, one ignition coil is used per spark plug therefore no ignition cables are used.

IGNITION COIL RAIL U6000

The NGK **U6** type of coil supplies multiple spark plugs with high voltage via an ignition rail. Usually no ignition cables are used as the coil connects directly to the spark plugs similar to the plug top design, however exceptions include U6036 and U6037 (please refer to images at the rear of the catalogue for more information).

NOTES ON CATALOGUE USE

Always refer to fitting instructions if provided with component and adhere to the vehicle manufacturers repair procedure when replacing parts.

The application data within this catalogue contains a column headed 'Number of Pins'. This detail refers to the number of pins in the connector as illustrated below.

The number of pins within a connector block are shown here.
This plug top coil has 4 pins.

This block ignition coil has 3 pins
in the connector.

NEW IGNITION COIL ADDITIONS TO RANGE

These are new additions to this catalogue that have new part numbers not previously stocked by NGK Spark Plugs (UK) Ltd.
